

MAINTENANCE, REPAIR AND OPERATIONS

▲ ACCURATE

▲ DURABLE

▲ EASY-TO-USE

FOR THE PROFESSIONAL TRADESMAN

SET IT UP RIGHT THE FIRST TIME

Minimize downtime and repair intervals with Johnson MRO products. Whether you're maintaining a manufacturing or industrial plant, healthcare facility or commercial building, we have what you need for precise setup of your equipment, including alignment lasers and precision layout and measuring tools.

ALIGNMENT LASERS

Everything runs smoother with proper alignment – bar feeders, HVAC, conveyors, belts, sprockets, spindles, and more. And nothing gets you aligned faster than a high-quality laser. Johnson's alignment lasers can replace multiple traditional alignment tools, saving you time and increasing accuracy. Lasers are a visible reference for setting alignment, eliminating guesswork and calculations.

FEATURED PRODUCT: SHEAVE ALIGNMENT LASERS

Our most popular MRO products, sheave alignment lasers help align pulleys and sprockets to maximize drivetrain efficiency and reduce service interval.

Benefits of laser alignment include:

- Increased service interval
- Reduced bearing stress
- Reduced belt/chain wear
- Minimal drivetrain noise and power loss

How to use a sheave alignment laser:

1. Magnetically attach laser & targets

2. Adjust alignment until laser hits the target

3. Set belt tension

DIGITAL MEASUREMENT

Whether you're measuring length, area, depth, angle or thickness, Johnson's digital measurement tools are designed to give fast, accurate results.

Laser Distance Meters

Precision measurement of length, area, volume and more. Some models feature Bluetooth® smartphone integration.

Digital Levels, Protractors & Bevel Boxes

Ideal for measuring angles accurately over small distances.

Digital Indicators and Calipers

For simple, high-accuracy length measurement.

Optical Instruments

Auto-levels are ideal for high accuracy measurement of angles over long distances.

LAYOUT & LEVELING TOOLS

Not everything needs to be digital! Many of our traditional level and layout tools feature lifetime warranties and are engineered for professionals. Our traditional tools are the preferred choice for layout of small jobs.

Levels

I-beam, box, and torpedo levels.

Squares

Rafter & framing squares, combination squares, t-bevels.

Tape Measures

Featuring architectural scales for easy reading of blueprints.

Measuring Wheels

Quickly measure longer distances – perfect for floor stripping, general layout, and estimating.

JOHNSON LEVELS, LASERS AND LAYOUT TOOLS - READY FOR ANY PROJECT

FAST, ACCURATE MEASURING

WORK SMARTER WITH BLUETOOTH®

EASILY MEASURES ANGLE DISPLAYS

AUTO INVERTS FOR OVERHEAD MEASUREMENTS

LEVEL UP.®

To Level Up® is to achieve a new height in performance and never look back. Whether you're leveling up to a tracking rotary, the world's first programmable digital level, or even our EZ-Clean™ bamboo masonry level, you'll work faster, safer, and smarter with Johnson products.

- Rotary Lasers
- Dot Lasers
- 360° Lasers

Johnson's ties to the tradesmen are second to none. For over 70 years, we've been developing innovative products such as the Johnny Square® rafter square and the RockRipper® drywall square, in conjunction with professional tradesmen.

Our goal is simple: we engineer levels, lasers and layout tools that help professional tradesmen work faster, safer, and more accurately. We stand behind these products with best-in-class warranties along with service and calibration from our Wisconsin headquarters.
